Art Unit 1713

1. This application contains claims directed to the following patentably distinct species of the claimed invention: A specific combination of components a, b and c each specifically identified.

Applicants are required under 35 U.S.C. § 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, claims 1 and 12 are generic.

Applicants are advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicants will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicants must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicants traverse on the ground that the species are not patentably distinct, applicants should submit evidence or identify such evidence now of record showing the

species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. § 103(a) of the other invention.

2. Claims 1-46 are rejected under 35 U.S.C. § 112 both first and second paragraphs as being both indefinite as to scope and broader than one of ordinary skill in the art is enabled by the disclosure to practice the invention. Applicants' disclosed invention gives one of ordinary skill in the art enough information to practice the invention only with specific polymers, ethylenic polymers, in combination with specific compounds. Nowhere is one of ordinary skill in the art given enough information even to identify the "anhydrous compound" of the claims nor to readily identify what the claims are referring to with their component b "having at least one element chosen from Group VI-A elements of the Periodic Table". In the lower claims one is instructed that these are di or polysulfides but even these compounds do not necessarily contain sulfur as can be seen in the disclosure. It is certainly clear that one of ordinary skill in the art could not identify combinations of these two elements with any and all polymers, whether synthetic or natural, and produce usable compositions. The scope of the claims is, therefore, indefinite and far broader than one of

ordinary skill in the art is enabled from the disclosure to practice the invention. The claims are, therefore, properly rejected under 35 U.S.C. § 112 both first and second paragraphs.

This rejection under 35 U.S.C. § 112 has been made in order to facilitate prosecution in this application. Consideration of the prior art is held in abeyance pending resolution of the election of species requirement presented above.
